

## STEAM HUMIDIFIER

### Protect Investments and Improve Comfort

#### WHY HUMIDIFICATION?

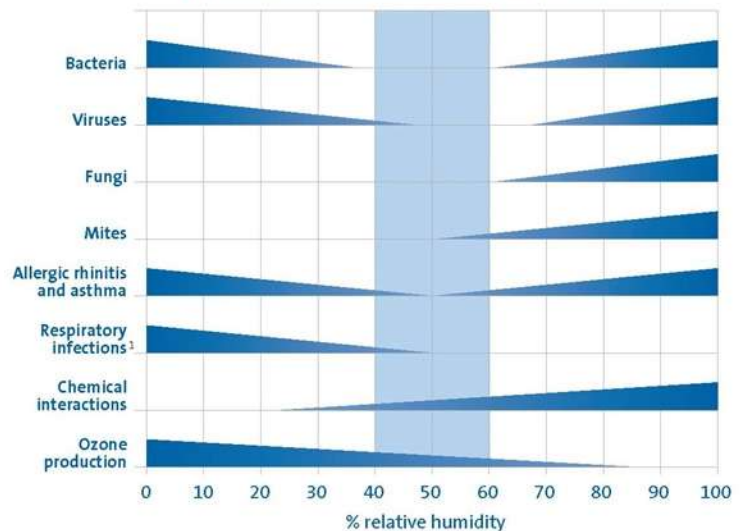

Improving health and wellbeing with humidity control 40-60% RH (relative humidity) is the ideal condition for our overall wellness, the efficient functioning of our respiratory immune system and the prevention of spreading airborne microbes and pollutants throughout buildings.

“Take action and join me in the fight against respiratory infections! Relative humidity of 40-60% in buildings will reduce respiratory infections and save lives.”

**Dr. Stephanie Taylor**

Infection Control Consultant at Harvard Medical School  
ASHRAE Distinguished Lecturer & member of the ASHRAE Epidemic Task Group

Optimum Relative Humidity Ranges for Health

#### Protects valuable investments

Wood floors, plaster, wallpaper, paint, furniture, musical instruments, plants, and even electronics will perform better and last longer in a properly humidified room.

#### Dry air and skin

Low humidity dries the outer layer of our skin leading to itchiness, cracking, and dermatological problems.

#### Productivity

Maintaining the optimum humidity in a workplace improves employee health.
